

## Vonem ElipVPN

Vonem ElipServices® - Virtual Private Network  
The Vonem ElipVPN Provides Site-to-site and Remote Access to Your Network

A major factor contributing to improved worker productivity over the past decade is the increased availability of work resources beyond the traditional confines of an office environment. Laptops, PDAs and other portable devices have empowered employees to perform business functions anywhere, anytime.

The virtual private network, or VPN, has made this transition possible, by enabling people to communicate securely over the Internet from just about any location.

Delivered as a managed service, ElipVPN removes the typical challenges of configuring and administering your own personal virtual private network. Management is addressed through a simple call to technical support, and you can rest assured that your communication system has been 'future proofed' to eliminate the cost of equipment obsolescence &ndash; as new technology standards are issued, your ElipSwitch will be updated to keep your technology relevant and current.

Each ElipVPN service enables secure remote access (the ability to retrieve company files from home) and site-to-site access (share company files across multiple business locations). And, when coupled with ElipShare, a file sharing service from Vonem, you will have a secure, reliable system for sharing, distributing and storing important business documents, regardless of your location.

### Remote Access VPN Site-to-site VPN

- Remote access to your company network is limited to authorized users
  - Perfect for remote home-users or road warriors
  - Service works with Windows XP, Vista or Mac environment
  - Uses Point-to-Point Tunneling Protocol (PPTP)
- 
- Securely connect multiple offices together to share files, cross communicate or run integrated software applications
  - Simply deploy ElipServices at each location, contact technical support and you will have a fully managed, site-to-site secure network at a fraction of the price of deploying yourself

### ElipVPN Benefits:

- Designed specifically for the small business &ndash; service is automatically activated as needed, only for authorized users who are part of your network environment
- Dual VPN functionality &ndash; delivered as a managed service, ElipVPN combines both remote and site-to-site secure connectivity for one low monthly cost, easing budgetary and management challenges
- Easy setup and configuration &ndash; simple instructions accompany each ElipSwitch device that make installation a straight forward process; of course our tech support will always be available should you need help
- Eliminate equipment obsolescence &ndash; as an ElipVPN customer, you are entitled to receive new equipment as technological breakthroughs become available, effectively future-proofing your VPN, avoiding playing the catch up game of staying current with your technology equipment
