

## Vonem Elip File Storage

Vonem ElipServices&trade; - Shared StorageElipShare Enables Collaborative Sharing and Storing of Digital Files

Electronic files have become the workhorse of businesses today. Accessing, distributing and storing these critical information assets is paramount to running your business, while at the same time serving your customer base efficiently and cost effectively.

Serving such a critical component of your data infrastructure, it is easy to justify the creation of information repositories to collect, store and distribute this information. The challenge for the small business, however, is that a sophisticated system can be quite costly and complex to install and maintain.

ElipShare solves this problem by providing an easy to install and administer system that lets you collaboratively store, share and secure electronic files within your local area network. And, to ensure these files are always available, they can be securely backed up with Vonem&rsquo;s ElipServices Remote Backup module.

Setting up a shared storage on your network is as easy as 1, 2, 3:

- Plug in your ElipSwitch, ensuring your system is operational
- Users are automatically notified when the shared drive becomes available for file sharing
- Drag and drop files to the shared drive for group collaboration, storage and distribution of your files

Not only will you have access to a robust shared file repository, but it will now be possible to establish both shared and private folders, or &lsquo;zones&rsquo;, within your file server. This way, some user files may be segregated to specific user groups, while others may be posted to public directories for group access<sup>1</sup>.

### Benefits

- With one file location, shared storage saves time and effort by making it easier to find the right file version in a central location, facilitating file collaboration throughout the office
- Assigning users to specific folders enables you to enforce &lsquo;read-only&rsquo;, &lsquo;readwrite&rsquo; or restrict access rules to each folder
- Minimize the threat of harmful employee attacks or errors by restricting access to critical shared folders as &lsquo;read only&rsquo;
- New folders can be added or removed quickly and efficiently
- Works with Elip Remote Backup service to provide a managed remote backup server for each of your shared files, so they are backed up nightly

<sup>1</sup> Files must be stored on the hard drive provided as part of your ElipServices system
