

Signature Shared Plans

The product's unique platform was designed with security and easy customer migration in mind. The platform delivers a level of security and customer privacy similar to a Virtual Private Server. Initially, Serv-All Signature Hosting is best suited for small or individual firms, our SOHO customers, but the service will expand so that you can easily migrate any of your growth from a simple site to a much more complex solution. What's more, our servers are housed in Vonem's state-of-the-art data centers and are supported by Verio's global Tier-1 network.

Serv-All Signature Hosting also includes Web mail--so you can enjoy secure access to your e-mail from any computer connected to the Internet. Web mail has ample configurable email accounts with a robust, easy-to-use interface.

In addition to rich feature choices and easy modification, Serv-All Signature Hosting allows you to manage your accounts through our control panel and includes a simple to use Content Management System (CMS). Our CMS System allows you to create your site, change the look and feel, and allows you to create blogs, RSS feed, and offer downloads for your clients.
